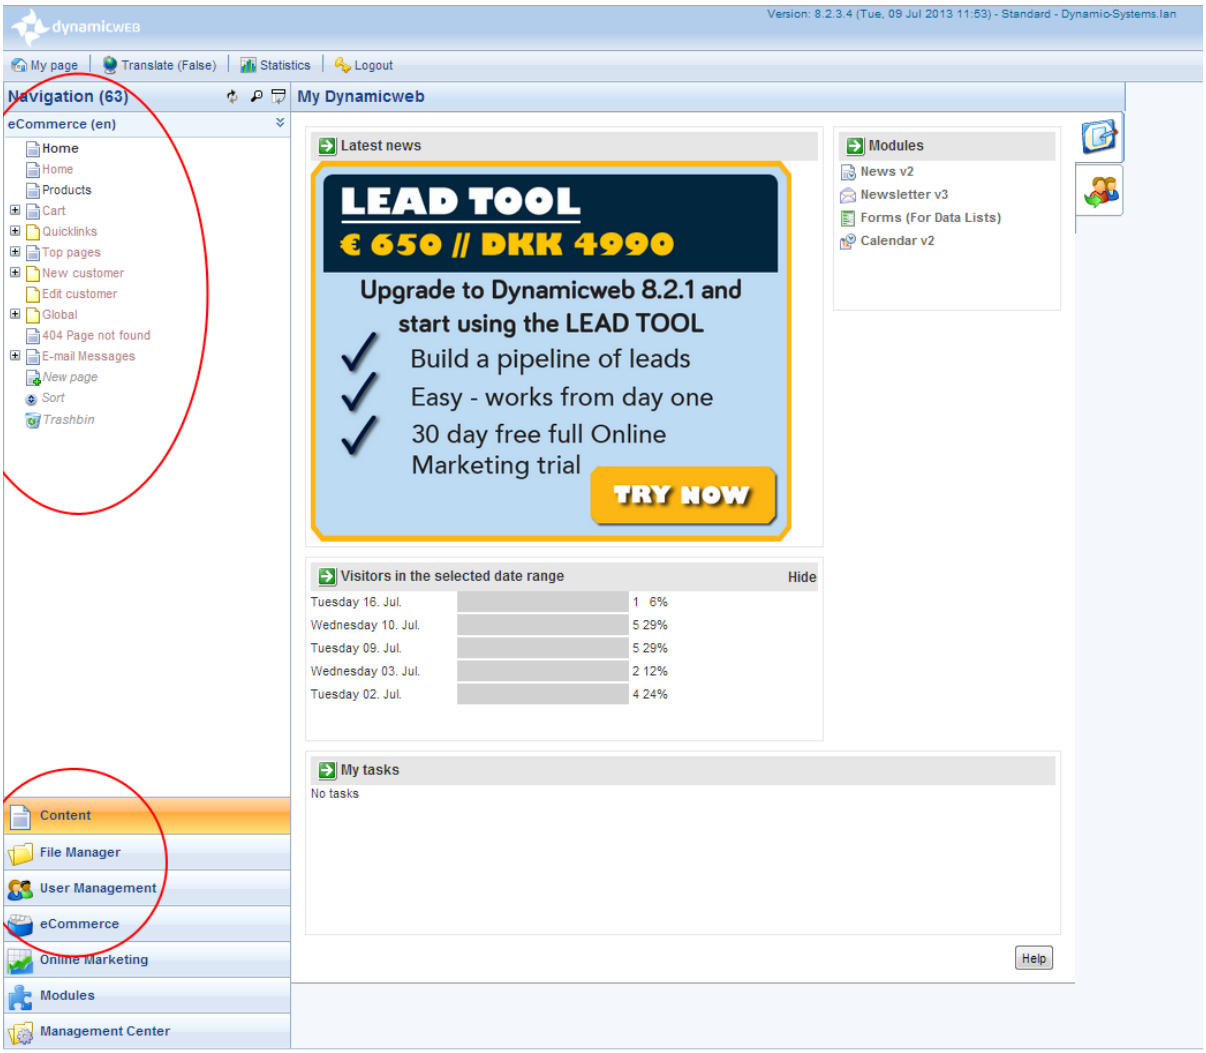
## Solutionset2013

Cookbook on how to setup a webshop on top of Dynamicwebs demo webshop ”Solutionset2013”

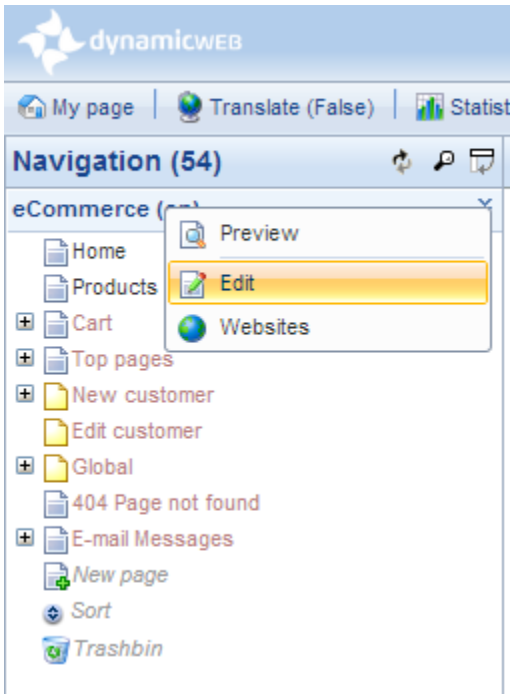
To begin with, log in to the backend of your shop.



In the left side you will have the menu to navigate between the pages on your site, click them to see whats on each page. Under this menu we have the main-menu to navigate between content, files, eCommerce (products) and ect. In this cookbook these 3 menus are the most important ones.

## Website settings

Right click on your website and click edit, now the website settings will appear.



These settings will help you to control different things on your site. There is also some required settings to make features on your shop to function *(marked with red)*

| | |
|---|---|
| Logo Image | Upload you own logo to files, and use it from here. *To get the best result use logo height: 80px.* |
| Skin | Overwrite all css, with a default skin |
| Custom CSS Url | Make some changes in a custom CSS and upload it to make changes to your page* |
| Favicon | Add a little favicon *(icon that is displays beside your tittle in the browser)* |

| | |
|---|---|

| Create Account Page ID | |
| Edit Account Page ID | |
| Customer Center Page ID | |
| Create Account Page ID (modal) | |

### *Custom CSS

With solutionset2013, you have the option to make css changes to a custom.screen.css file. Changes made in this file will overrule css made in screen.css. By default we made a custom scss file, that gets compiled to custom.screen.css. *(http://compass-style.org/install/)*

In this file we have made it easy to change button colors, headercolors, productheader colors. Change the variables in the scss file, and compile it. Make sure that you have defined the custom css url in website settings.

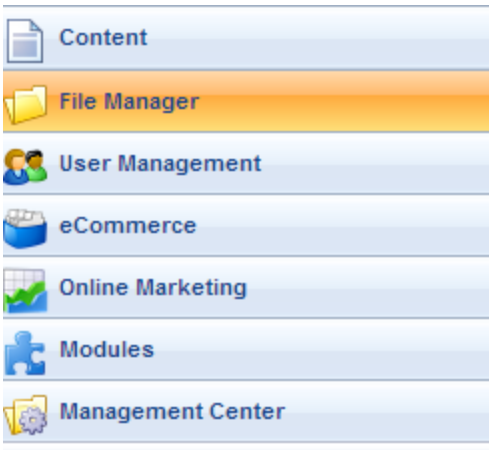
## Frontpage

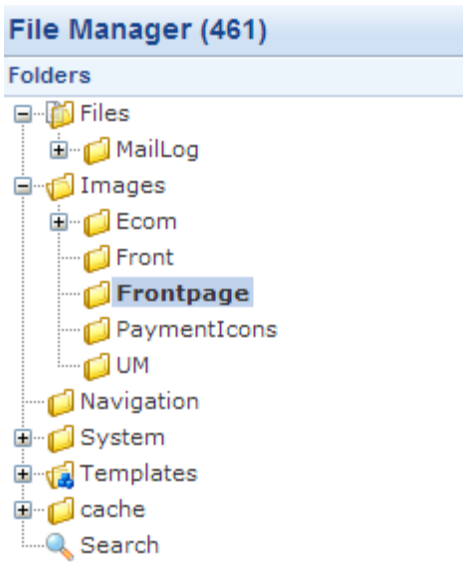
Click on “Home”, this is your main frontpage. Your right side of the screen should now change to something like this:

1. Add new slide: “New paragraph” and choose “item types” slider.

Give the slider a name and add the image, link, buttonname, headline and text to your slide.

*(To upload your own images, go to “file manager” and chose your folder to upload images)*



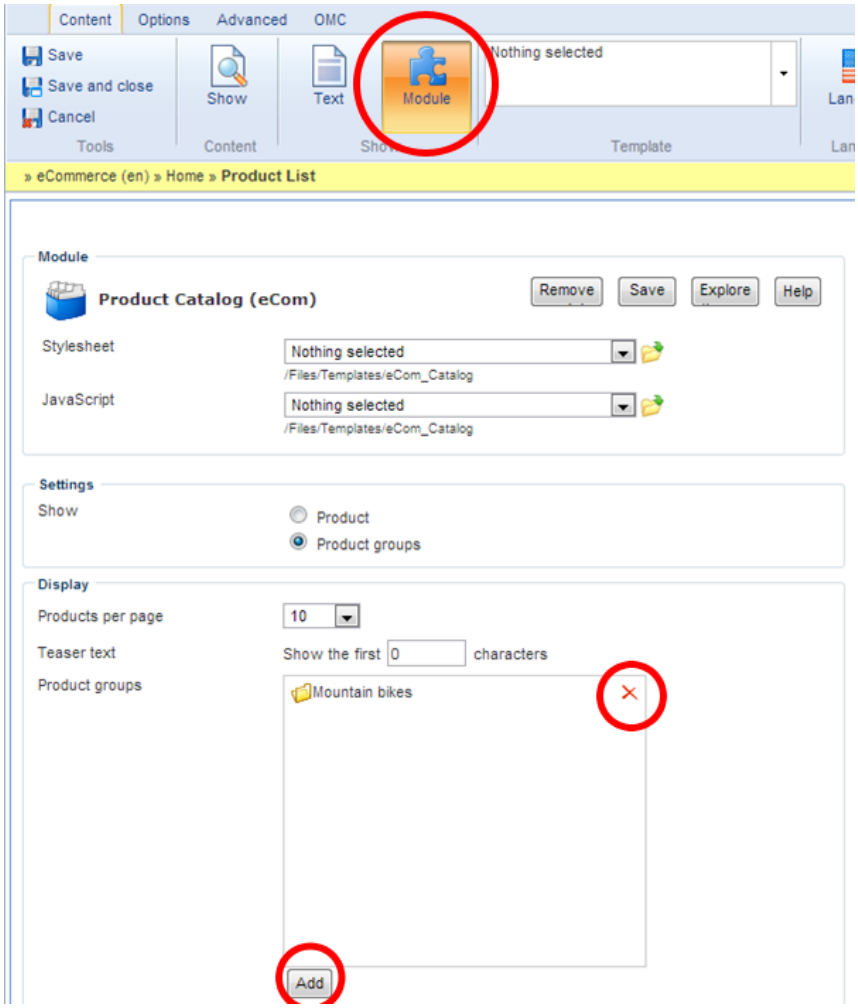


*(Default we upload slider images in images/Frontpage folder)*

*Edit slide:* Choose the slide your wish to change the content of. From here you can change the link, buttonname, headline and text to your slide:

2. Edit fields under slider: Click on the line, and edit the text field that appears.

3. Edit product slider: Click on the line and click on the “module” icon.

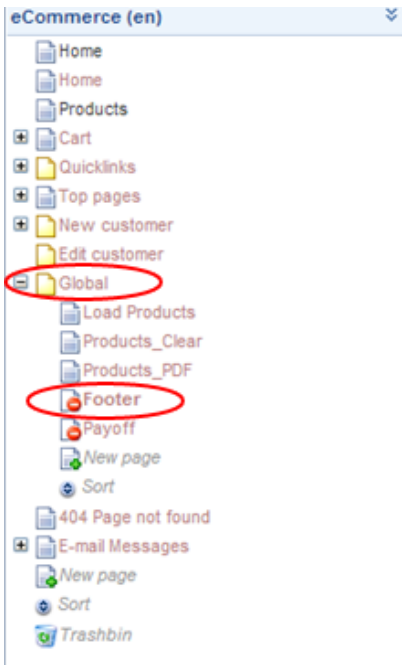


Now you can add either product groups or specific products to your slider. Click “add” and choose your product groups, or your products.

4. Edit content on frontpage: Click on the line, and edit the text field that appears.

## Payoff and Footer

Payoff and Footer content in the solutionset, is a global page that is defined and included on each page. To change the content of these find “global” in the menu, and under it “Payoff” or ” footer”.



*(The most important thing in this, is to define the ID of these two pages in the website settings, see XX below)*

To change “Trustpilot”, click on “source” and paste your own trustpilot code, you get from www.truspilot.com.

*(There is only space for 4 elements in the footer item)*

## Cart and OneStepCheckOut

In this solutionset you have the option to choose a more compact cart and/or more compact checkout. Its simply a template you have to change on each module. The two new templates are called ShowCart_Compact.html and OneStepCheckout_Compact.html.

*(This is an example for changing OneStepCheckOut, the same can be done on the page “Cart”)*
